OFFER

Our core competence is manufacture of stamped and deep drawn parts as well as components made from all types of common steel and stainless steel and nonferrous metals with a material thickness from 0.5 mm to 12 mm on manual and automatic stamping machines with a pressing capacity from 30 to 630 tons, and development and production of stamping tooling. Hi-Steel is also a fully-equipped subcontractor for resistance welding and customized mechanical assemblies.

As one of the country's biggest toolmakers with a well-trained team of tooling engineers, we are able to offer total commitment from design and project management to function and monitoring.

The company has rich experience of over 20 years in the production of metal components for demanding customers in the automotive, agriculture, heavy truck and other industries. Our technological profile is aimed at high mix-low volume inquiries.

Desired cooperation:

We are looking for long-term cooperation partners; we offer stamping, deep drawing, assembly and resistance welding service.
