OFFER

Autonomous driving is one of the most significant future fields for the automotive industry. After all, driverless technologies offer previously unimagined potential for making mobility more sustainable, more comfortable, and, above all, safer. Simultaneously, the diversification of the expertise and skills needed to bring autonomous mobility to fruition also means we are a driving force for ideas and an innovation leader.

Autonomous Mobility (AM) being the main focus in Kaunas plant, we are pooling all of the expertise needed to develop innovative solutions for assisted and automated driving. We pave the way for driverless mobility – with a clear vision, a detailed strategy, and an open, dynamic culture that is geared towards collaboration.

Continental AG is the third biggest automotive components manufacturer in the world providing various parts to automotive OEM's.
