## OFFER

Proton Engineering is a complete provider of complex products consisting of pipe bending, end shaping, sheet metal work and welding with a high degree of automation as well as a complete assembly for the automotive and engineering industries.

We offer our customers a total solution in the form of design assistance, product development, prototypes, serial production, surface treatment and direct deliveries. We can help you from the sketch to a finished product through construction solutions, development of prototypes, samples and evaluation series.

At Proton Engineering we work with qualified complete solutions about pipe bending and welding. From prototypes and series production, to assembly, and various forms of delivery and logistics solutions. We manufacture components to world leading automotive and engineering industries.
